

## Continuous Quality Improvement (CQI) Self-Assessment

Introduction: This tool is completed by staff and other program stakeholders<sup>1</sup> to help identify strengths and needs related to creating and/or maintaining a CQI environment. It is unrealistic to expect that your program is doing all of the activities identified in the tool. However, you will no doubt find that you are already practicing many CQI activities. The tool should help you identify what you are doing well and ideas for strengthening your approach to developing a CQI environment.

**What is CQI?** Continuous Quality Improvement is a process to ensure programs are systematically and intentionally increasing positive outcomes for the families they serve. It is an ongoing process that involves the *Plan, Do, Study, Act* cycle described in brief below.

### The Plan, Do, Study Act Cycle

**Plan:** Planning evidence-informed or evidence-based programs and practices that meet the needs and desires of a targeted population

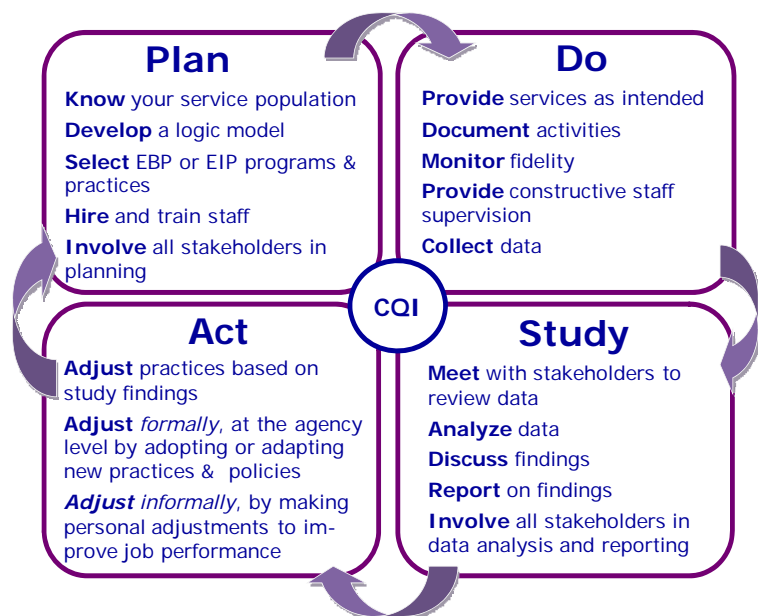

- This includes the development of a logic model and hiring and training staff that “fit” the requirements of the service model.

**Do:** Providing the services as intended

- Documenting activities
- Monitoring *\*fidelity*
- Ongoing constructive supervision
- Collecting data
  - ✓ formally, through outcome and implementation evaluation activities, focus groups, needs assessments, self-assessment, peer review and study of research findings, and
  - ✓ informally, through self-observations, direct or indirect feedback from participants, staff, funders and other stakeholders.

**Study:** Collecting and analyzing data

- reviewing and analyzing data
  - ✓ formally, in the course of staff supervision, full staff meetings, board meetings, and
  - ✓ informally, through daily discussions with staff and participants; self-assessment of job performance, observation of day-to-day participant progress and satisfaction

<sup>1</sup> In this document, “stakeholders” includes program staff, management, funders, boards of directors and parent/consumer advisors.

**Act:** Adjusting practices based on findings

- o Making decisions on practices
  - ✓ formally, by adopting new practices, programs, policies and procedures based on findings, and
  - ✓ informally, by making personal adjustments to improve job performance

### CQI Self-Assessment Tool

Below are 9 CQI sections, each broken into related items. Please review the items with your stakeholder team (be sure to always include parent participants as members of your team). Rate each item based on your discussions. The self assessment team may choose to complete only a few sections at a time.

Please answer the items below using the following scale:

## Glossary

**Core Components** (sometimes referred to as key elements or active ingredients) These are the key services or activities of an Evidence-Based Program that have been demonstrated or are believed, based on program theory, to lead to the identified program outcomes. These components must remain intact during any implementation of that program.

**Evidence-Based Practices:** These are approaches to prevention or treatment that are validated by some form of documented scientific evidence. This could be findings established through scientific research, such as controlled clinical studies, but other methods of establishing evidence are valid as well. There are different types of evidence based practices; these include “supported” or “well supported,” based on the strength of the research design.

**Evidence-Based Programs:** Evidence-based programs use a defined curriculum or set of services that, when implemented with fidelity as a whole, have been validated by some form of documented scientific evidence. Different types of evidence-based programs include “supported” or “well-supported,” based on the strength of the research design.

**Evidence-Informed Practices:** Evidence-informed practices use the best available research and practice knowledge to guide program design and implementation within context. This informed practice allows for innovation and incorporates the lessons learned from the existing research literature.

**Fidelity** This means implementation of an evidence-based program faithful to the core components of the original model and is implemented as it was intended.

**Indicators** (sometimes referred to as performance objectives, performance targets, objectives) Indicators answer the question: What is it that tells someone that an outcome has been achieved? Indicators are concrete, specific descriptions of what will be measured to judge a program’s success. An indicator can include the number or percentage of participants projected to achieve the outcome. For more information go to <http://www.friendsnrc.org/outcome/toolkit/evalplan/logic/indicators.htm>

**Logic Model** A logic model is a map of the program. It is a simple, logical illustration of what the program does, why the program does it and how observers will know if the program is successful. There is a wide variety of logic-model formats, but most have the same key components. The elements of a logic model will become clearer as you go through the logic-model building process. Although the process is laid out step by step, you will need to make sure that decisions made in later steps still match choices you made earlier in the process.

For more information go to <http://www.friendsnrc.org/outcome/toolkit/evalplan/logic/index.htm> , the FRIENDS Logic Model Builder at <http://www.childwelfare.gov/preventing/developing/toolkit/>, or the FRIENDS Online Learning Center at <http://www.friendsnrc.org/resources/onlinelearn.htm> , which has an online course in logic models and other topics.

**Practice Based Evidence:** “A range of treatment approaches and supports that are derived from, and supportive of, the positive cultural attributes of the local society and traditions. Practice Based Evidence services are accepted as effective by the local community, through community consensus, and address the therapeutic and healing needs of individuals and families from a culturally-specific framework. Practitioners of practice based evidence models draw upon cultural knowledge and traditions for treatments and are respectfully responsive to the local definitions of wellness and dysfunction.....” (Isaacs, Huang, Hernandez, Echo-Hawk, 2006)

**Qualitative Data:** Narrative pieces of data collected routinely and systematically through focus groups, interviews, opened ended questionnaire items, and other less structured situations.

**Quality Assurance (QA)** refers to activities intended to ensure that services reliably satisfy consumer needs requirements in a systematic, reliable fashion. QA is a part of the CQI process most related to the planning. It has a strong emphasis on consumer satisfaction, which is consistent with the CQI process.

**Quality Improvement (QI)** refers to activities for ensuring that the necessary resources and supports for providing a high quality service are in place. It includes the ongoing enhancement of implementation processes to improve services. Its emphasis is on the Study and Act pieces of the Plan Do Study Act Cycle.

**Theory of Change** A theory of change is an articulation of the steps or outcomes needed to bring about a given long-term goal. This set of steps is based on research and practice outcomes already proven and is often solidified through the logic model for a program. The concrete articulation of the theory of change through a logic model helps programs describe the types of services that will bring about the intended changes they seek.

**Underlying Program Theory** The underlying program theory can be defined as a plausible and sensible model of how a program is supposed to work.

**Vision** (sometimes referred to as long-term impact or a long-term goal) This is a brief statement about your hope for the future. What do you want for the families and community that you serve? A vision statement does not necessarily need to be measurable. Your program is not necessarily responsible for single-handedly achieving it. Rather, your program should contribute to its achievement.
